

Tool	Data	Why ?	How ?	FC-task	Corroborating Tools	Required External Evidence	XAI Applications
Keyframe extraction	Video	Used in other image-only tools	Katna Other techniques				Selected frames should be shown
Transcript	Video	Used in other text-only tools	STT technologies				
Description	Video	Used in other text-only tools	VLM				
OCR	Image	Identifying dates, locations, people, people Detecting inconsistencies	OCR technologies	OOB detection	Title Metadata Transcript	Information about the identified elements	Directly showing the inconsistencies
Deepfake Detection	Video	Detecting deepfake	Deepfake detection tools	Manipulation Classification			Results + Confidence
AI detection	Video Image	Detecting AI-generated media	AI-generated media detection tools	Manipulation Classification			Results + Confidence
Metadata Analysis	Metadata	Can help detect inconsistencies with information from other tools	Yt-dlp retrieves metadata from SNS EXIF	OOB detection	Title Transcript Description OCR	Information about the poster	Inconsistencies detected
Lip-sync detection	Video Audio	Detecting out of context or manipulated audio	SyncNet Wav2Lip	Manipulation Classification	Deepfake/AI Detection		Results + Confidence
Weather Detection	Video Image	Detecting if the weather for the claimed date/location is coherent	VLM Specialized CNNs	OOB detection	Metadata Geolocation	Actual weather reports for the claimed date/location	Identified weather and (in)consistencies

Geolocation	Image	Detecting if the identified location is the same as the one claimed	Landmark recognition GeoSpy	OOB detection	Metadata Title Transcript		Identified location (in)consistencies
Facial Recognition	Video Image	Detecting famous people allows us to detect potential inconsistencies in what is claimed	Specialized model with a famous people database.	Manipulation Detection Veracity Classification	Title Transcript	Wikipedia pages of identified people	(In)consistencies between claimed discourse and actual opinions
NER	Transcript OCR Description	Allows for further connections to KG	spaCy	Claim Identification		KG related to identified named entities	Found entities and why (+ connections to KG)
Brand / Organism recognition	OCR Title	Identifying a brand or an organisation can allow us to know if it's trustworthy or not (ie The Onion)	NER VLM logo recognition	Veracity Classification	Metadata Analysis	Wikipedia pages of media/brand	If the posting media is notably untrustworthy or satirical, that's evidence
Reverse Image Search	Image Keyframes	Detect reuse of old or unrelated media in new contexts	Google Reverse Image Search API TinEye	OOB detection	Metadata Analysis	RIS is done online	RIS is key in traditional FC processes.
